

STUDENT ANALYSIS TOOL

Objective: It will develop an online platform through which any student can track his or her academic performance. The system will enable students to view marks, attendance, progress reports, datasheets, and certificates, and will come with an intuitive interface for administrators to update records and information for the students.

Scope: This covers:

- Two-factor authentication of students' and parents' log-in.
- Students can also create a profile and up-date personal information: ID, name, date of birth, gender.
- Student Dashboard-where the student can view access to his profile, report cards for four terms, attendance details, progress graphs, datasheets, and certificates printable.
- Admin functionality for adding/updating marks for students, attendance records of students, and datasheet.
- Contact Us and About Us sections for more information.

Methodology: These are the steps to be followed in this project.

- Front end development: Easy interface for students and admins using HTML, CSS, and JavaScript.
- Backend development: Implementation of PHP for server-side logic and ensured secure login and registration. Management of the database using MySQL to put in storage all the details, marks, attendance, and datasheet of the students.
- Implement two-factor authentication to ensure all accounts for students are secure using authentication, hence no unauthorized access to the account.
- Admin Panel We would create functionality that the administrators would work on with the information of the students, including marks, attendance, and datasheet would be added/updated.

- Charts & Reports: Graphs and charts will be included to demonstrate student progress and performance over the four terms.

Expected Outcome:

- Students will be able to monitor their academic performance, attendance, and soon sit for the exams.
- Moreover, administrators will be able to edit and update student records themselves to ensure data accuracy and timeliness.
- The entire educational process will be improved by having better communication and interaction between students, parents, and administrators due to the new system introduced.
